- Cladding: 1mm steel sheet
- Finish: Powder coated
- Fixing: Concrete base - base plate
- Frame: Fully welded seats and supports - carbon steel

Poppy Shelter 30

Poppy Youth Shelter

The Poppy Youth Shelter is a popular design that is suitable in a wide range of situations. The shelter can be used either as a youth shelter, a parent waiting shelter, or as an outdoor classroom. The circular design of the shelter and the central seating post means that a teacher can place every child at the front of the class and maintain a higher level of attention than typical classroom layouts. The fun colours and design of the shelter makes learning fun for the children too. Teachers using the poppy shelter report that children look forward to a lesson in the shelter and remain more engaged for longer periods during lesson time.

The shelter is typically clad in sheet metal and powder coated in either poppy red and green (above) or blue and yellow (right), with many other colours available. Although this shelter is a modular design and can be altered, it comes in a standard size of 6 x 6m holding an average of 30 children (based on children of 10yrs).
